

## We would like to invite you

to take part in our research study, the causes of type 1 diabetes. It involves donating a small blood sample and answering a few questions on details of your medical history. The amount to be taken will be no more than 1-3 tablespoons (10-40 ml). We plan to carry out genetic and immunological studies on the blood sample. Before you decide whether or not to take part, it is important for you to understand why the research is being done and what it will involve. Please take the time to read the following information carefully. Please ask us if there is anything that is not clear or if you would like more information. Participation is entirely voluntary.

## What is the purpose of this study?

The purpose of this study is to find the genes that cause insulin-dependent (also called type 1) diabetes to enable us to identify individuals at risk of developing the disease and to understand its basic causes. Ultimately we hope this will lead to preventive treatment in these at risk individuals.

## Why have I been chosen?

For the study we require type 1 diabetics, their unaffected siblings and other healthy volunteers, to enable us to establish differences between those who develop diabetes and those who do not.

## Do I have to take part?

Taking part in this research study is entirely voluntary. It is up to you to decide whether or not you wish to take part. If you decide to take part you will be given this information sheet to keep and will be asked to sign a consent form. If you do decide to take part you are still free to withdraw from the study at any time without giving a reason. A decision to withdraw or not to take part, will not affect the standard healthcare you receive.

***If you choose to withdraw from the study your sample will be destroyed.***

## What will happen to me if I take part?

If you agree to take part, you will be invited to donate a blood sample of up to 40 ml (1-3 tablespoons) either by attending the Clinical Research Facility at Addenbrooke's Hospital, Cambridge or we can arrange to visit you to collect the sample. You will also be asked a few questions on your medical history and to sign a consent form.

## What are the possible disadvantages and risks of taking part?

Blood sampling can cause some discomfort, when the needle is placed in the vein and the blood is drawn and there is the possibility that a bruise may develop. Light-headedness and fainting may also result from blood sampling.

## What are the possible benefits of taking part?

There are no direct benefits to any of the participants that take part in this study but we hope the research will help us to identify the genes that cause diabetes and the role of these genes in the immune system. This will help us to identify individuals at risk of developing the disease. Ultimately we hope this may lead to preventive treatment in these at risk individuals. The project has no direct therapeutic value but is a contribution to science. The research study may also lead to discoveries of relevance to diseases and conditions other than type 1 diabetes.

## Will my taking part in this study be kept confidential?

Yes, in order to maintain confidentiality, each individual participating in the study will be assigned a study number which will be maintained throughout the study; all specimen samples will be stored and referred to by the study number only; and the identity of participants will not be made available to anyone in the research team who will use the samples. The study will be carried out in a completely anonymous fashion.

## What will happen to the results of the research study?

Cambridge University and the sponsors of the study, the Juvenile Diabetes Research Foundation and the Wellcome Trust, both research charities, may have an interest in using the genetic and biological information found from the testing or analysis of your blood for the development of new products that might help the diagnosis, treatment and prevention of the disease. Patent applications may be made in these respects.

You are under no obligation to participate in this study. You can withdraw at any time without having to explain why.

## What should I do next?

If you would like to take part in the study or you would like more information about your involvement before deciding, please feel free to contact the study team by email at:

**[t1-diabetes@cimr.cam.ac.uk](mailto:t1-diabetes@cimr.cam.ac.uk)**

Alternatively, you can contact the study coordinator, Sarah Nutland on 01223 763223
